

MAURI

Compact Disc Player

The Plinius Mauri allows you to slip a disc into the slot, sit back and enjoy the music you love – no more effort required.

The Mauri maintains Plinius' trademark track display function consisting of a distinctive array of LEDs that show what track is playing and how far through the CD you are; rather like looking down on a vinyl record as the arm moves across the tracks.

The CD101 won several awards for its musicality and you'll find

these qualities are retained in the Mauri Compact Disc Player.

The Mauri utilises the highly acclaimed DAC from the CD101 that has high quality Burr Brown components and local voltage regulation.

Developments also include subtle improvements to the analogue

circuits, reduced wiring, improved connectors and a new custom designed transformer. The Mauri also has a different transport than the Plinius CD101.

It goes without saying that the Mauri has a superb finished anodised finish, typical of all the products in the Plinius range.
